Roofing Google Ads by State

The Full 50-State Data

The complete dataset behind the Roofing Google Ads Benchmark: every state, every tier. For each state: the roofing firms we researched, the firms with a verified advertiser presence in Google's Ads Transparency Center, how those firms split across the four tiers, and the Operator share.

How this data was gathered

CSRA Marketing researched 433 roofing firms across all 50 states and checked each one in the Google Ads Transparency Center, Google's public database of advertiser activity. For 287 firms we could verify an advertiser presence and count the active ads tied to it. For 146 firms we could not confirm an advertiser under the firm's own name.

Read this before you quote a number

- **Counts are advertiser entity totals, not spend.** An ad count is not ad spend, impressions, clicks, or leads. A firm running 3 ads can outspend a firm running 100. Count measures presence and testing activity.
- **Firms are attributed to their home market state.** The Transparency Center exposes no per-state split. When a firm advertises under a parent company, a roll-up, or a franchise entity, the count belongs to that entity, and multi-state entities can appear in more than one state's research.
- **Ranges count at their low end.** Where Google reports a bucket (for example, 100 to 200 ads) instead of an exact number, we recorded the low end. Every total here is a floor.
- **No entity found does not mean no marketing.** Some firms run Local Services Ads, which sit outside this data. Others advertise through an agency account or a parent brand. Those firms are unconfirmed in this dataset, not proven inactive.
- **State samples are small.** Most states have fewer than 10 verified firms in this pass. Treat state shares as directional. The national tier split (287 firms) is the sturdy finding.
- **Data collected October 2026.** Ad counts change constantly. This is a snapshot, and CSRA will recount within 18 months.

The four tiers

Operators — 100 or more active ads. **Builders** — 20 to 99. **Dabblers** — 5 to 19. **Testers** — 1 to 4. Nationally: 52 Operators (18%), 108 Builders (38%), 85 Dabblers (30%), 42 Testers (15%) of 287 verified advertisers. Dabblers and Testers combined are 44%.

Operator share = Operators divided by verified firms in that state. Shares are rounded. Firms advertising under national entities are counted in the state section where they were researched, per the methodology above.

What to do with this

Find your state. Count the Operators. In most markets there are one to three, and that small group is collecting the clicks your ads are not. The fix is rarely a bigger budget. It is the machine around the clicks: a page built for the search, tracking that ties ads to booked jobs, follow-up in minutes, and an SEO base that keeps the phone ringing between campaigns.

That is the work CSRA Marketing does for roofing companies: websites and local SEO built to turn searches into booked jobs, measured the way an owner measures, by what it brings in and how fast it pays back.
